

Import papers using .csv files in the Evidence Mapper

When importing a .csv file you need to use the template file. This contains a set number of column headings that the Evidence Mapper is set up to expect. You can paste in the details of all the papers you want to upload under the relevant column heading.

If you are uploading the .csv file for an Evidence Map, add any additional fields to the Evidence Mapper before uploading the .csv file.

When your .csv file is ready to be uploaded, click “Browse”, locate your file and click “Import”.

You will come to a page to check your column headings match the field names the Evidence Mapper is set up to receive. Once everything matches, click “Import”.

You will then be shown how many papers were successfully uploaded.

CSV column headings	Import into
