# Importing abstracts for screening

After setting up a project and selecting the "Screen Abstracts" option, you will be presented with this page.

It includes options to add abstracts from different sources, all of which require an import name to be able to upload the collection.

The CSV option can be used to add content already in .csv format or content from sources such as interviews.

Tip: use template provided

If you have used the *Crystallise Heoro database* to run your search, you can upload the .json file.

You can add a paper manually by entering the details in the relevant online form.

Step 1: Import Papers
Step 2: Automatic Deduplication
Step 3: Screening Roles
Step 4: Calculate Decisions
Step 5: Reconciliation
Step 6: Results

Upload a file — Browse
File must be a .ris file
Import name
Please provide a name for this collection of papers (e.g. the source), so they can be identified as a collection in results stages
Import

NBIB
File
Upload a file — Browse
File must be a .nbib or .txt file
Import name
Please provide a name for this collection of papers (e.g. the source), so they can be identified as a collection in results stages
Import

Import and include papers from other Projects
Select Project

Continue to deduplication process

The RIS option is a common format from a literature database or reference manager.

The NBIB option is available for searches conducted on PubMed.

You can also add papers from other projects. Click "Select project" and find the one you want to include papers from.

You can add papers from multiple sources, which will deduplicate automatically.
