

Importing NBIB files

To use this option, ensure the file you are uploading has .nbib formatting.

Select the “[Browse button](#)” and locate your NBIB file.

Add a brief description of what the file is in the “[Import name](#)” box, such as the source used to generate the file. Then click “[Import](#)”.

The screenshot shows the 'NBIB' import form. It has a title 'NBIB' at the top. Below it is a 'File' section with a text input field containing 'Upload a file' and a 'Browse' button on the right. Below the input field is a note: 'File must be a .nbib or .txt file'. Underneath is an 'Import name' section with a text input field. Below that is a note: 'Please provide a name for this collection of papers (e.g. the source), so they can be identified as a collection in results stages'. At the bottom right of the form is an 'Import' button, which is highlighted with a purple arrow pointing to it from the left.

The screenshot shows a success message box. It has a title 'Import success' and a message 'Successfully uploaded 40 papers'. On the right side of the box is a 'Back to Import Papers' button, which is highlighted with a purple border.

You should see a page confirming the number of successfully uploaded papers.

You can then click “[Back to Import Papers](#)” to continue with the next steps.
